

Abstract of the Disclosure

A wheeled trunk **10** having handle **11** for being dragged on the ground, comprising on the lid **12** thereof a plurality of spaced hooks **13** which can interconnect with corresponding loops **22** fitted at the periphery of a bag **20** matching the wheeled trunk **10** whereby enabling the bag **20** attached temporarily to the lid **12** of the wheeled trunk **10**. The opening of each hook **13** is disposed substantially in the reverse direction to the area enclosed by the hooks **13**. Each of the hooks **13** is fitted in a concavity **121** formed on the lid **12** of the wheeled trunk **10**. At least one of the loops **22** is elastic and generates restoring tension when it is elongated.
